

**Nyantiok Manas W. Bul**

**My Reflections.**

I am passionate about pursuing a career in acute care hospitals or skilled nursing facilities, where infection control is vital to ensuring positive patient outcomes. These settings demand rigorous infection prevention measures, and I am eager to contribute my expertise to reduce healthcare-associated infections (HAIs) through evidence-based practices. My long-term goal is to expand my impact globally by traveling to developing countries, where I can participate in infectious disease research, outbreak response, and public health initiatives aimed at improving infection control standards in underserved regions.

With a Bachelor of Science in Nursing (BSN), a Master's in Health Professions (MHP), and years of clinical experience as a registered nurse, I possess a strong foundation in patient care, epidemiology, and infection prevention protocols. My hands-on experience has equipped me with the skills to identify infection risks, implement preventive measures, and educate healthcare teams on best practices. This background gives me a competitive advantage in securing roles focused on infection control and positions me to excel in both clinical and research-oriented settings. Ultimately, I aim to bridge the gap between frontline patient care and global health efforts, ensuring safer healthcare environments for all.
